Walkable Room

Grace Tan

Procedural Asset

- Ramp to create vase profile
- Jitter points to create variation in cell size and orientation

- Extrusion on individual faces for scale-like appearance
- Noise on Cd (vertex color) attribute for iridescent material color
- Varied input parameters, offsets, and scale to produce different vases

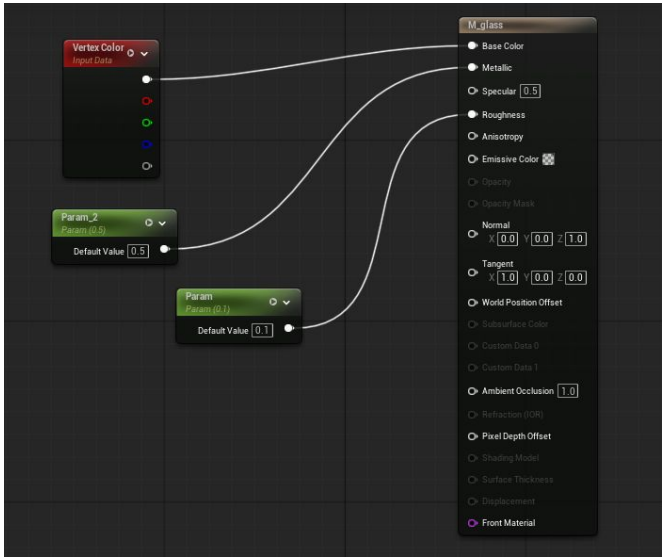

Procedural Material

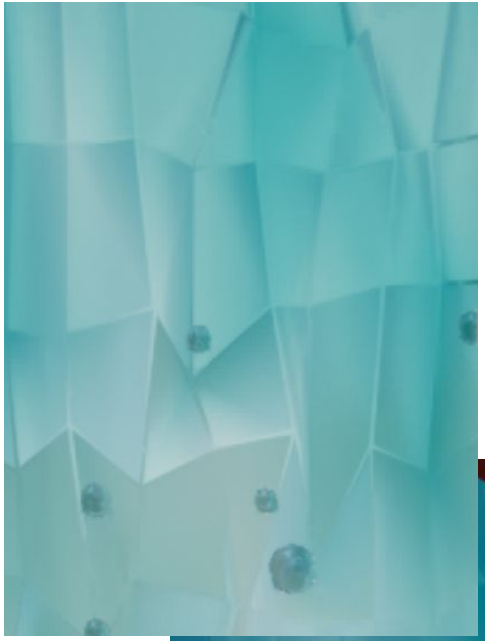

In Houdini:

- Applied noise to Cd attribute
- Used float instead of vector noise to vary shade of blue previously applied

In Unreal:

- Decreased roughness for glossy look
- Increase metallicness for shiny look

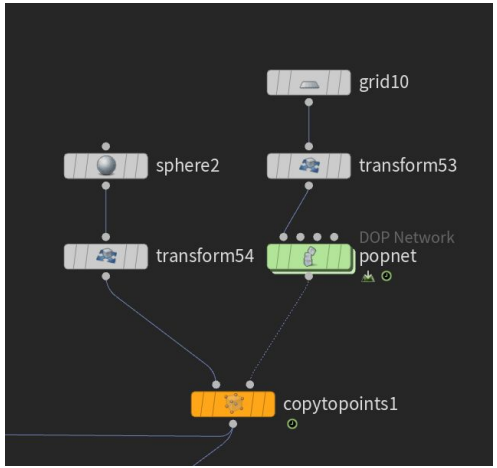

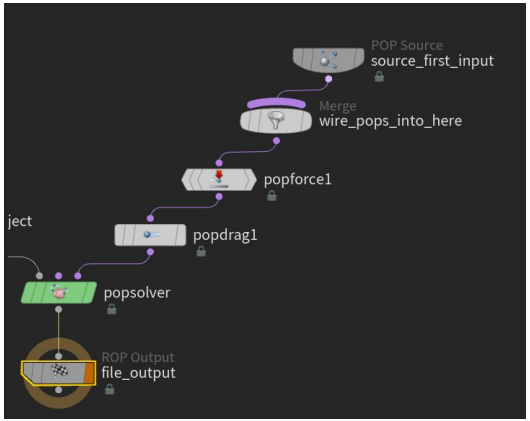

Decorative Glass Windows

Used grid geometry + noise on P (point) attribute for a glass mosaic look

Animation

Bubble Animation

- Used POP network to simulate particles
- Used POP force and POP drag to create slow, drifting bubble motion
- Used copytopoints to create bubble geometry

Design System

Rules

- Colors
  - Emphasize iridescent blues, purples, pinks
  - Make sure to not let anything lean too green/yellow (was thinking about adding plants, but decided on orange coral instead)
  - orange/red for pops of color
- Patterns
  - Emphasize pattern repetition
  - For example: windows, vases, table/chair, rug texture
- Keeping everything else simple
  - To emphasize the patterns, I kept other colors simple (white, beige)
  - Added some texture to the white walls to “fill” the space a little more

General color scheme/vibe inspired by modern beach houses

Wanted something more whimsical - inspired by stained glass designs
